The South Carolina Advanced Technological Education Center (SCATE) is a National ATE Center for Expanding Excellence in Technician Education. SCATE, with continuous funding support from National Science Foundation since 1994, is well-established and widely-connected. SCATE resources support the development of a highly skilled technician workforce in engineering, manufacturing, and industrial technologies via faculty development and mentoring, problem-based learning, research, evaluation, and student scholarships and internships. SCATE serves America's technician and related STEM educators and the students they teach as well as industry partners. SCATE provides the nation's only online service that proactively connects educators to relevant professional development. SCATE also offers the only searchable Compendium of Research on Technician Education. More than 3,000 registered users and others rely on information from SCATE websites: www.TeachingTechnicians.org, www.scate.org, and www.Mentor-Connect.org.

This material is based on work supported by the National Science Foundation under grant numbers, DUE# 1204463 and #1501183.
